KINETIC SEPARATOR

ENGLISH

Kinetic separator

The separation occurs thanks to the suspension within an air flow of the lighter materials, together with the kinetic effect of the conveyor belt. Heavier polluting bodies fall down due to the gravity effect and are discarded, whereas lighter pollutants are suspended in air and separated from the cleaned wooden chips. Three fractions are obtained after separation: clean wood chips, heavy pollutants, light contaminants (sand, paper, cellophane, polystyrene).

The kinetic separator is often associated with a dust aspiration system.

Advantages

- Effective separation of heavy pollutants from the wood chips
- Easy regulation of the separator achieved through inverters
- Velocity of the belt and intensity of the air flow are easily adjustable
- Low energy consumption thanks to the inverters that drive the belt and the fan.

Recycled wood

> Rejects from Macrochips

> Rejects from Microchips

Virgin wood

KINETIC SEPARATORS RANGE				
Type		KS-80	KS-100	KS-150
Capacity	m³/h	80	100	150
INSTALLED POWER				
Belt conveyor	kW	1,5	2,2	3,0
Main fan	kW	30,0	37,0	45,0
Rotary valve	kW	1,5	2,2	2,2
Cyclone	DN	1400	1600	1800
Exhaust air	m³/h	3000	4000	5000
OVERALL DIMENSION				
Length	mm	3900	3900	3900
Width	mm	2000	2300	2800
Height	mm	1700	1700	1700
